

Savings Tips

Appliances

Run your dishwasher, clothes dryer, and clothes washer before 3 p.m. and after 7 p.m. to take advantage of lower rates.

Cooling

Begin cooling your home before Peak Hours begin at 3:00 p.m. on weekdays. Then, raise the temperature by just four degrees during the peak period. You'll stay cool and save.

Make a Habit of Saving

Up to 10% of electricity use can be reduced by unplugging appliance and devices when you're not using them. Unplug your coffee maker, microwave, and toaster, and unplug chargers when your devices reach 100% charged.

Heating

Set your thermostat between 68 and 70 degrees when you're home and at 65 degrees or lower when you're away. You can save around 3% on heating costs for each degree you lower your thermostat.

Lighting

Install LED bulbs to save energy and money. ENERGY STAR®-certified lighting uses up to 90% less energy than traditional incandescent bulbs.

Dishwasher

Run full loads in your dishwasher. About the same amount of energy and water are used in each wash, regardless of the load size.

Programmable Thermostat

Install a programmable thermostat to automatically adjust your home temperature during peak and off-peak hours.

Clothes Dryer

Fill up your clothes dryer, but don't overload it. The dryer needs space for air circulation to efficiently dry fabrics. And did you know that a longer drying cycle on a low heat setting uses less energy?

Clothes Washer

Use the cold water setting whenever possible. Heating the water can account for up to 90% of the energy it takes to operate a clothes washer.
